1. Introduction

Find Your Team is a WordPress plugin that presents contributors with a short, five-question quiz and recommends the WordPress contribution team that best matches their skills, interests, and working style.

The plugin was designed for use on make.wordpress.org/contribute/ and similar onboarding pages. Its goal is to help newcomers — and returning contributors looking for a new challenge — navigate the more than 20 Make WordPress teams without feeling overwhelmed.

Who is this plugin for?

- WordPress community organisers running contributor days or onboarding workshops.
- Educators and trainers at WordCamps who want to direct attendees to the right team.
- Site owners who want to embed a contribution guide for their readers.
- WordPress.org team leads who want to customise the quiz for their own audiences.

Key Features

- Five targeted questions covering activity preference, skills, experience, passion, and working style. Each question can independently use single-select (radio) or multi-select (checkbox, up to 3 answers) input.
- Tag-based scoring algorithm that ranks all 23 default Make WordPress teams.
- Top match displayed as a prominent card, plus four runner-up teams.
- Fully customisable via the WordPress admin — add, edit, or remove questions, answers, and teams.
- No jQuery dependency — pure vanilla JavaScript.
- Accessible: ARIA labels, keyboard navigation, and focus management throughout.

2. Installation & Activation

Installing from a ZIP file

1. Download or export the find-your-team/ folder as a .zip archive.
2. Log in to your WordPress admin dashboard.
3. Navigate to Plugins > Add New Plugin.
4. Click Upload Plugin and select your .zip file.
5. Click Install Now, then Activate Plugin.

Installing manually via FTP / file manager

6. Upload the entire find-your-team/ folder to /wp-content/plugins/ on your server.
7. In your WordPress admin, go to Plugins > Installed Plugins.
8. Find "Find Your Team" in the list and click Activate.

Requirements

- WordPress 5.8 or later.
- PHP 7.4 or later.
- No additional plugins or libraries required.

Note: The plugin stores its configuration in `wp_options` using the keys `fyf_questions` and `fyf_teams`. These are created automatically on first save. No database tables are created.

3. Embedding the Quiz

Once the plugin is activated, embed the quiz anywhere on your site using the following shortcode:

```
[find_your_team]
```

The shortcode can be placed in any page, post, or widget area that supports shortcodes. It is self-contained — it loads its own CSS and JavaScript only on pages where it appears.

Recommended placement

- A dedicated "Contribute" or "Get Involved" page.
- A WordCamp or contributor day event page.
- An onboarding email landing page.
- Inside a WordPress block using the Shortcode block in the Block Editor.

Using the Block Editor (Gutenberg)

9. Edit the page where you want to embed the quiz.
10. Click the + block inserter and search for "Shortcode".
11. Add the Shortcode block and type `[find_your_team]` inside it.
12. Preview or publish the page.

Using the Classic Editor

13. Edit the page in the Classic Editor.
14. Switch to the Text tab.
15. Paste `[find_your_team]` where you want the quiz to appear.
16. Save or publish the page.

4. Admin Settings Overview

The plugin settings are located at Settings > Find Your Team in the WordPress admin dashboard. Only users with the `manage_options` capability (Administrators) can access this page.

The three tabs

Questions

Edit the quiz questions and their answers. Each answer carries a set of comma-separated tags that power the matching algorithm.

Teams

Edit the destination teams — the cards shown at the end of the quiz. Each team has a name, icon, URL, description, and a list of tag weights.

Usage

Shows the `[find_your_team]` shortcode with a copy button, and explains how the matching algorithm works.

Expand All / Collapse All

Both the Questions and Teams tabs display items in an accordion. Use the Expand All and Collapse All buttons in the top-right of each tab to open or close all items at once.

Save vs. Reset

Each tab has a Save button (saves your changes to the database) and a Reset to defaults link (deletes any saved overrides so the plugin falls back to its built-in data). A confirmation dialog is shown before resetting.

5. Managing Questions

Questions are the screens presented to contributors during the quiz. Each question has a text field and one or more answers.

Editing a question

17. Go to Settings > Find Your Team > Questions.
18. Click a question row to expand it.
19. Edit the Question Text field. The accordion label updates live as you type.
20. Click Save Questions when done.

Adding a question

21. Scroll to the bottom of the Questions list.
22. Click + Add Question.
23. A new blank question is added and automatically expanded.
24. Fill in the Question Text, then add at least one answer.
25. Click Save Questions.

Removing a question

26. Expand the question you want to remove.
27. Click the Remove link on the right side of the accordion header.
28. Confirm the prompt, then click Save Questions to persist the change.

Note: *There is no undo after saving. Use Reset to defaults to restore all built-in questions.*

Managing answers within a question

Each answer row has two fields:

Field	Description
Answer text	The option shown to the contributor on the quiz card. Keep it concise — one phrase, under 60 characters.
Tags (comma-separated)	A list of keyword tags assigned to this answer. When a contributor selects this answer, all its tags are collected and used to score teams. Example: code, php, dev

- Add Answer: click the + Add Answer button below the answers list to add a new blank answer row.

- Remove Answer: click the × button at the end of any answer row.

Note: *A question must have at least one answer, and each answer must have at least one tag, or it will be discarded on save.*

5.3 Answer Type

Each question has an Answer Type setting that controls whether contributors can select one answer or up to three answers.

To change the answer type for an existing question:

29. Expand the question you want to configure.
30. Locate the Answer Type row.
31. Select Single answer (radio) or Multiple answers (checkbox, up to 3).
32. Click Save Questions.

The Answer Type controls how contributors interact with the question on the frontend:

- Single answer (radio): the contributor picks exactly one option. The frontend renders circular radio-style indicators.
- Multiple answers (checkbox, up to 3): the contributor may select between one and three options. The frontend renders square checkbox-style indicators. The hint text “Select up to 3 options.” is shown automatically.

Note: Changing the answer type for a question does not affect its answers or tags — only how many the contributor can pick on the frontend.

The Answer Type badge in the accordion header shows “Single” or “Multi” at a glance so you can review all questions without expanding each one.

6. Managing Teams

Teams are the result cards displayed at the end of the quiz. The plugin ships with 23 built-in Make WordPress teams. You can add, edit, or remove teams at any time.

Team fields

Field	Description
Team Name	The team's display name. Shown in the result card heading. Required.
Icon (emoji)	A single emoji character used as a visual identifier. Shown next to the team name.
Team URL	The full URL of the team's Make WordPress page (e.g. https://make.wordpress.org/core/). Shown as the "Visit Team Page" call-to-action button.
Description	A short paragraph (1–3 sentences) describing the team. Shown in the result card body.
Tag Weights	A list of tag-name / weight pairs. See below.

Tag Weights

Tag weights are the core of the matching algorithm. Each team has a set of tags and a numeric weight (1–10) for each. The higher the weight, the stronger the team's association with that tag.

Weight	Meaning
9–10	This is a defining characteristic of the team. Use for 1–2 tags maximum.
7–8	Very strong association — a major part of the team's work.
5–6	Strong association — clearly relevant but not exclusive.
3–4	Moderate association — the team touches this area occasionally.
1–2	Weak association — a minor or indirect connection.

Adding a tag weight

33. Expand the team you want to edit.

34. Scroll to the Tag Weights section.
35. Click + Add Tag Weight.
36. Enter the tag name (lowercase, no spaces — e.g. php or frontend).
37. Set a weight from 1 to 10.
38. Click Save Teams.

Removing a tag weight

39. Find the tag row you want to delete.
40. Click the × button on the right.
41. Click Save Teams.

Note: *Tag names are case-insensitive in the matching logic but are stored as lowercase keys. Always use lowercase when entering tag names to avoid mismatches.*

7. How the Matching Algorithm Works

The algorithm is simple, transparent, and entirely driven by the tag data you configure in the admin.

Step-by-step

42. The contributor answers all five quiz questions. Depending on the Answer Type set for each question, they select either one answer (radio) or up to three answers (checkbox).
43. Each selected answer carries a list of tags (e.g. ["code", "php", "dev"]). All tags from all five answers are collected into a single flat list — duplicates included.
44. The tag list is tallied: each tag is counted by how many times it appears. If the contributor chose two answers that both carry the "code" tag, that tag has a count of 2.
45. Every team is scored. For each tag in the tally, if the team has that tag, the team's score increases by: tag weight $\times$ tag count.
46. All teams are sorted by score (highest first).
47. The top-scoring team is displayed as the primary recommendation. The next four teams are shown as secondary suggestions.

Worked example

Suppose a contributor selects answers that produce this tag tally:

Tag	Count
code	3
php	2
dev	2
design	1

The Core team has these weights:

Tag	Weight	Count	Score contribution
code	5	3	$5 \times 3 = 15$
php	5	2	$5 \times 2 = 10$
dev	5	2	$5 \times 2 = 10$

Core's total score = $15 + 10 + 10 = 35$.

The Design team has design=5 and receives $5 \times 1 = 5$ points. Core outscores Design 35 to 5, so Core is the top recommendation.

Tie-breaking

In the event of a tie, teams are displayed in their stored order (the order they appear in the Teams admin tab). You can influence tie-breaking by reordering teams or fine-tuning weights.

Score of zero

If a contributor's answers produce no tags that match a given team, that team receives a score of zero. It can still appear in the results if enough other teams also score zero, but it will always rank below any team with a positive score.

8. Complete Tag Reference

This table lists every tag used in the default plugin data, in alphabetical order. "Used by answers" shows which quiz answer texts carry this tag. "Associated teams" shows which teams have a weight for this tag, with the weight in parentheses.

Note: The following tags appear only in team weights and are NOT carried by any quiz answer: *beauty, build, ecosystem, learn, quality, reach, security*. These tags can never be triggered by current quiz answers and will not influence matching unless you add them to answer tags as well.

Tag	Used by answers	Associated teams (weight)
a11y	Accessibility or inclusive design	Accessibility (5)
accessibility	Accessibility or inclusive design Making WordPress accessible to everyone, everywhere	Accessibility (5)
advanced	Developer — I write plugins or themes regularly	CLI (3), Playground (3), Core AI (3), Core (2)
async	Independently, on my own schedule A mix of both	Documentation (4), TV (4), Photos (4), Polyglots (3), Support (3), Training (3), Test (3), Core (2), Design (2)

9. Complete Default Questions Reference

Below is a complete listing of all five default quiz questions, their answers, and the tags each answer carries.

Question 1: Which of these activities sounds most exciting to you?

[Answer Type: Multiple answers (checkbox, up to 3)]

Answer	Tags
Writing or reviewing code	code, php, javascript, dev
Designing interfaces and user experiences	design, ux, ui
Writing documentation, tutorials, or guides	writing, docs, education
Helping people solve problems	support, community, education
Making software available in other languages	translation, i18n, community
Creating or curating multimedia content	media, video, photos
Organising events and growing communities	community, events, outreach

Question 2: Which of these best describes your strongest skill? [Answer Type: Multiple answers (checkbox, up to 3)]

Answer	Tags
PHP / backend development	php, code, dev, backend
JavaScript / frontend development	javascript, code, dev, frontend
Mobile development (iOS / Android)	mobile, swift, kotlin, dev
DevOps / infrastructure / server management	devops, hosting, infrastructure
Graphic design or UI/UX	design, ux, ui
Writing or content creation	writing, docs, education
Speaking or writing in multiple languages	translation, i18n
QA / testing / bug reporting	testing, qa, bugs
Event organisation / community management	community, events, outreach
Accessibility or inclusive design	accessibility, a11y, design
Command-line tooling / developer experience	cli, devtools, dev
Performance optimisation	performance, code, dev

Question 3: How would you describe your experience level with WordPress? [Answer Type: Single answer (radio)]

Answer	Tags
Brand new — I am still learning the basics	beginner, support, education
Experienced user — I build sites but rarely write code	intermediate, support, community, docs
Developer — I write plugins or themes regularly	advanced, code, dev, php
Core contributor — I already contribute to WordPress	expert, code, dev, meta

Question 4: Which outcome matters most to you personally? [Answer Type: Multiple answers (checkbox, up to 3)]

Answer	Tags
Improving the quality and reliability of WordPress	testing, qa, performance, code
Making WordPress accessible to everyone, everywhere	accessibility, translation, i18n, community
Helping people learn and grow with WordPress	education, docs, training, support
Building powerful new features and tools	code, dev, php, javascript
Making WordPress more beautiful and easier to use	design, ux, themes
Strengthening the plugin and theme ecosystem	plugins, themes, code

Question 5: How would you prefer to contribute? [Answer Type: Single answer (radio)]

Answer	Tags
Independently, on my own schedule	async, docs, translation, photos
Live team meetings and real-time collaboration	sync, community, events, support
A mix of both	async, sync, code, dev

10. Complete Default Teams Reference

All 23 default teams are listed below with their descriptions and full tag weight tables.

Core

URL: <https://make.wordpress.org/core/>

Build the WordPress software itself. Work on PHP, JavaScript, and REST API with developers from all over the world.

Tag	Weight (1-10)	Strength
code	5	★★★★★☆☆☆☆☆
php	5	★★★★★☆☆☆☆☆
dev	5	★★★★★☆☆☆☆☆
javascript	4	★★★★☆☆☆☆☆☆
backend	4	★★★★☆☆☆☆☆☆
frontend	3	★★★☆☆☆☆☆☆☆
build	3	★★★☆☆☆☆☆☆☆
advanced	2	★★☆☆☆☆☆☆☆☆
expert	2	★★☆☆☆☆☆☆☆☆
async	2	★★☆☆☆☆☆☆☆☆
sync	2	★★☆☆☆☆☆☆☆☆

Design

URL: <https://make.wordpress.org/design/>

Shape the look and feel of WordPress. Create mockups, contribute to the design system, and improve user experience.

Tag	Weight (1-10)	Strength
design	5	★★★★★☆☆☆☆☆
ux	5	★★★★★☆☆☆☆☆
ui	5	★★★★★☆☆☆☆☆
beauty	3	★★★★☆☆☆☆☆☆
themes	2	★★☆☆☆☆☆☆☆☆
async	2	★★☆☆☆☆☆☆☆☆
sync	2	★★☆☆☆☆☆☆☆☆

Mobile

URL: <https://make.wordpress.org/mobile/>

Develop the official WordPress apps for iOS and Android using Kotlin, Swift, and React Native.

Tag	Weight (1-10)	Strength
mobile	5	★★★★★☆☆☆☆☆
swift	5	★★★★★☆☆☆☆☆
kotlin	5	★★★★★☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆
javascript	3	★★★★☆☆☆☆☆☆
code	3	★★★★☆☆☆☆☆☆
frontend	3	★★★★☆☆☆☆☆☆

Accessibility

URL: <https://make.wordpress.org/accessibility/>

Ensure WordPress is usable by everyone, including people with disabilities. Work on audits, testing, and inclusive design.

Tag	Weight (1-10)	Strength
accessibility	5	★★★★★☆☆☆☆☆
a11y	5	★★★★★☆☆☆☆☆
reach	4	★★★★☆☆☆☆☆☆
design	3	★★★★☆☆☆☆☆☆
testing	3	★★★★☆☆☆☆☆☆
code	2	★★★☆☆☆☆☆☆☆

Polyglots

URL: <https://make.wordpress.org/polyglots/>

Translate WordPress and its ecosystem into every language. Make WordPress truly global.

Tag	Weight (1-10)	Strength
translation	5	★★★★★☆☆☆☆☆
i18n	5	★★★★★☆☆☆☆☆
reach	4	★★★★☆☆☆☆☆☆
community	3	★★★★☆☆☆☆☆☆
async	3	★★★★☆☆☆☆☆☆

Support

URL: <https://make.wordpress.org/support/>

Answer questions in the WordPress.org support forums. Help users from beginners to advanced site owners.

Tag	Weight (1-10)	Strength
support	5	★★★★★☆☆☆☆☆
community	4	★★★★☆☆☆☆☆☆
beginner	3	★★★☆☆☆☆☆☆☆
intermediate	3	★★★☆☆☆☆☆☆☆
sync	3	★★★★☆☆☆☆☆☆
async	3	★★★☆☆☆☆☆☆☆
education	2	★★☆☆☆☆☆☆☆☆

Documentation

URL: <https://make.wordpress.org/docs/>

Write and maintain user guides, developer handbooks, and end-user documentation for WordPress.

Tag	Weight (1-10)	Strength
writing	5	★★★★★☆☆☆☆☆
docs	5	★★★★★☆☆☆☆☆
education	4	★★★★☆☆☆☆☆☆
async	4	★★★★☆☆☆☆☆☆
learn	3	★★★☆☆☆☆☆☆☆
beginner	2	★★☆☆☆☆☆☆☆☆

Themes

URL: <https://make.wordpress.org/themes/>

Review and approve themes submitted to the WordPress.org theme directory. Help maintain quality standards.

Tag	Weight (1-10)	Strength
themes	5	★★★★★☆☆☆☆☆
design	4	★★★★☆☆☆☆☆☆
ecosystem	4	★★★★☆☆☆☆☆☆
ui	3	★★★☆☆☆☆☆☆☆
php	3	★★★☆☆☆☆☆☆☆

code	3	★★★★☆☆☆☆☆☆
------	---	------------

Plugins

URL: <https://make.wordpress.org/plugins/>

Keep the plugin ecosystem healthy. Review guidelines, handle security reports, and support plugin developers.

Tag	Weight (1-10)	Strength
plugins	5	★★★★★☆☆☆☆☆
ecosystem	5	★★★★★☆☆☆☆☆
php	3	★★★★☆☆☆☆☆☆
code	3	★★★★☆☆☆☆☆☆
security	3	★★★★☆☆☆☆☆☆
dev	3	★★★★☆☆☆☆☆☆

Community

URL: <https://make.wordpress.org/community/>

Organise WordCamps, meetups, and contributor days. Grow the worldwide WordPress community.

Tag	Weight (1-10)	Strength
community	5	★★★★★☆☆☆☆☆
events	5	★★★★★☆☆☆☆☆
outreach	5	★★★★★☆☆☆☆☆
sync	4	★★★★☆☆☆☆☆☆
reach	3	★★★★☆☆☆☆☆☆

Meta

URL: <https://make.wordpress.org/meta/>

Build and maintain WordPress.org — the website, GlotPress, profiles, and all the tools contributors use.

Tag	Weight (1-10)	Strength
meta	5	★★★★★☆☆☆☆☆
code	4	★★★★☆☆☆☆☆☆
php	4	★★★★☆☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆

javascript	3	★★★★☆☆☆☆☆☆
expert	3	★★★★☆☆☆☆☆☆
devtools	3	★★★★☆☆☆☆☆☆

Training

URL: <https://make.wordpress.org/training/>

Create courses and lesson plans for learn.wordpress.org. Help people of all backgrounds learn WordPress.

Tag	Weight (1-10)	Strength
education	5	★★★★★☆☆☆☆☆
training	5	★★★★★☆☆☆☆☆
learn	5	★★★★★☆☆☆☆☆
writing	4	★★★★★☆☆☆☆☆
docs	3	★★★★☆☆☆☆☆☆
async	3	★★★★☆☆☆☆☆☆
beginner	2	★★☆☆☆☆☆☆☆☆

Test

URL: <https://make.wordpress.org/test/>

Improve WordPress quality by running manual and automated tests, writing test cases, and reporting bugs.

Tag	Weight (1-10)	Strength
testing	5	★★★★★☆☆☆☆☆
qa	5	★★★★★☆☆☆☆☆
bugs	5	★★★★★☆☆☆☆☆
quality	4	★★★★★☆☆☆☆☆
async	3	★★★★☆☆☆☆☆☆
code	2	★★☆☆☆☆☆☆☆☆
intermediate	2	★★☆☆☆☆☆☆☆☆
beginner	2	★★☆☆☆☆☆☆☆☆

TV

URL: <https://make.wordpress.org/tv/>

Review and publish WordCamp videos on WordPress.tv. Add captions and manage post-production.

Tag	Weight (1-10)	Strength
media	5	★★★★★☆☆☆☆☆
video	5	★★★★★☆☆☆☆☆
async	4	★★★★☆☆☆☆☆☆
writing	2	★★☆☆☆☆☆☆☆☆

CLI

URL: <https://make.wordpress.org/cli/>

Maintain WP-CLI, the command-line interface for WordPress. Build powerful developer tooling.

Tag	Weight (1-10)	Strength
cli	5	★★★★★☆☆☆☆☆
devtools	5	★★★★★☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆
php	4	★★★★☆☆☆☆☆☆
code	4	★★★★☆☆☆☆☆☆
advanced	3	★★★☆☆☆☆☆☆☆
expert	2	★★☆☆☆☆☆☆☆☆

Hosting

URL: <https://make.wordpress.org/hosting/>

Test pre-release WordPress on various server environments and maintain hosting best-practice documentation.

Tag	Weight (1-10)	Strength
hosting	5	★★★★★☆☆☆☆☆
infrastructure	5	★★★★★☆☆☆☆☆
devops	5	★★★★★☆☆☆☆☆
backend	3	★★★★☆☆☆☆☆☆
dev	3	★★★☆☆☆☆☆☆☆
quality	3	★★★☆☆☆☆☆☆☆

Openverse

URL: <https://make.wordpress.org/openverse/>

Work on the openly-licensed media search engine. Contribute via Python, Django, Vue.js, and more.

Tag	Weight (1-10)	Strength
code	4	★★★★☆☆☆☆☆☆
javascript	4	★★★★☆☆☆☆☆☆
media	4	★★★★☆☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆
frontend	4	★★★★☆☆☆☆☆☆
photos	3	★★★☆☆☆☆☆☆☆

Photos

URL: <https://make.wordpress.org/photos/>

Moderate and curate the WordPress Photo Directory. Contribute your own photography under a CC0 licence.

Tag	Weight (1-10)	Strength
photos	5	★★★★★☆☆☆☆☆
media	4	★★★★☆☆☆☆☆☆
async	4	★★★★☆☆☆☆☆☆

Core Performance

URL: <https://make.wordpress.org/performance/>

Measure and improve WordPress performance. Work on benchmarks, profiling, and optimisation patches.

Tag	Weight (1-10)	Strength
performance	5	★★★★★☆☆☆☆☆
code	4	★★★★☆☆☆☆☆☆
php	4	★★★★☆☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆
quality	4	★★★★☆☆☆☆☆☆
javascript	3	★★★☆☆☆☆☆☆☆

Playground

URL: <https://make.wordpress.org/playground/>

Build WordPress Playground — a fully in-browser WordPress experience powered by WebAssembly.

Tag	Weight (1-10)	Strength
-----	---------------	----------

javascript	5	★★★★★☆☆☆☆☆
frontend	5	★★★★★☆☆☆☆☆
code	4	★★★★☆☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆
devtools	4	★★★★☆☆☆☆☆☆
advanced	3	★★★☆☆☆☆☆☆☆

Core AI

URL: <https://make.wordpress.org/ai/>

Coordinate AI efforts within WordPress core, aligned with WordPress values and a plugin-first approach.

Tag	Weight (1-10)	Strength
code	4	★★★★☆☆☆☆☆☆
php	4	★★★★☆☆☆☆☆☆
dev	4	★★★★☆☆☆☆☆☆
javascript	3	★★★☆☆☆☆☆☆☆
advanced	3	★★★☆☆☆☆☆☆☆
expert	3	★★★☆☆☆☆☆☆☆

Core Program

URL: <https://make.wordpress.org/program/>

Strengthen cross-team coordination and empower contributors. Help keep the WordPress project running smoothly.

Tag	Weight (1-10)	Strength
community	4	★★★★☆☆☆☆☆☆
outreach	4	★★★★☆☆☆☆☆☆
sync	4	★★★★☆☆☆☆☆☆
events	3	★★★☆☆☆☆☆☆☆
meta	3	★★★☆☆☆☆☆☆☆
expert	2	★★☆☆☆☆☆☆☆☆

11. Tips & Best Practices

Tag naming consistency

The matching algorithm is case-sensitive to the extent that tag names are stored as plain strings. Always use lowercase, single-word identifiers with no spaces. Use a hyphen for multi-word concepts (e.g. full-stack) and be consistent: if you use "javascript" in answers, use "javascript" in team weights — never "js" in one and "javascript" in the other.

Weight calibration

A common mistake is assigning weights of 5 to all tags on all teams. This flattens the score distribution and makes ties more likely. Instead:

- Reserve 9–10 for the one or two tags that absolutely define the team.
- Use 5–7 for important but shared tags (e.g. "code" on Core, Meta, Plugins).
- Use 2–4 for tangential tags that give the team a small boost without dominating.
- A difference of 2 points on a tag that appears in the tally twice is worth 4 score points — meaningful but not overwhelming.

When to add a new question vs. a new answer

- Add a new answer when you want to cover an interest or skill that isn't currently represented in an existing question.
- Add a new question when you want to capture a completely new dimension (e.g. time availability, geographic location).
- Keep the total number of questions between 4 and 7 — fewer feels too vague; more feels like a survey.

When to reset vs. edit

- Use Reset to defaults when you want to undo all customisations and return to the bundled data.
- Use Save when you are making targeted changes and want to keep other customisations intact.
- There is no partial reset — resetting the Questions tab resets ALL questions. Export your settings (e.g. via a database backup) before a major reset.

Keeping teams up to date

The Make WordPress team landscape evolves. New teams are occasionally created (e.g. Core AI in 2024, Core Program). Check make.wordpress.org periodically and add new teams via the Teams tab, or update URLs and descriptions that have changed.

Orphan tags

Tags that exist only in team weights (not in any answer) will never be triggered and therefore have no effect on scoring. The default data includes a few of these (beauty, build, ecosystem, quality, reach, security) as placeholders for potential future quiz answers. Either add them to answer tags or remove them from team weights to keep the data clean.

12. Troubleshooting

The quiz shows the wrong team

Check that the answer's tags match the team's tag weights exactly (same spelling, lowercase). Use the Tag Reference table in Section 8 to verify. Remember that orphan team tags (those not in any answer) can never influence the result.

My saved changes are not showing on the frontend

WordPress caches options. Try clearing any page/object cache plugins (e.g. WP Super Cache, W3 Total Cache, LiteSpeed Cache) and reloading the page. Also confirm that the Save button was clicked and a "Settings saved." notice appeared.

The Next button stays greyed out

The Next button is disabled until the contributor selects an answer. This is intentional to prevent empty submissions. Ensure the quiz is not inside a container that intercepts radio button click events.

The quiz is not visible on the page

Confirm the shortcode `[find_your_team]` is present exactly as written, with no curly quotes (use straight quotes). Check that the plugin is activated. If using a page builder, try placing the shortcode in a "Shortcode" or "HTML" block rather than a text block.

An AJAX error is shown at the results step

This usually means the `admin-ajax.php` endpoint returned a non-JSON response. Check your browser's developer tools Network tab for the response body. Common causes: a PHP error in `wp-config.php`, a security plugin blocking requests, or a server-level firewall blocking POST to `admin-ajax.php`.

Resetting to defaults does not work

Ensure the user is logged in as an Administrator. The reset action uses a nonce for security — if the page has been open for more than 24 hours, the nonce may have expired. Reload the settings page and try again.

I removed all questions/teams and now the quiz is broken

If the `fyf_questions` or `fyf_teams` options are empty arrays, the plugin falls back to the built-in defaults automatically. However, an empty save (saving with zero questions) stores

an empty array rather than deleting the option. Use the [Reset to defaults](#) link to fully restore the defaults, or re-add questions manually.

Emoji icons display as boxes on some devices

Emoji rendering depends on the OS and browser. For maximum compatibility, use widely-supported emoji from Unicode 6.0–10.0. Alternatively, replace the icon field with an SVG or an HTML entity.
